

## **Vacuum Seals that fit Hold Fast Vacuum Drums**

**NOTE: We recommend that vacuum chucking only be used for light finish cuts and/or sanding. If using your vacuum chuck for removing the tenon ensure that you take small cuts as trying to remove too much material at once can result in dislodging your workpiece. When possible always use your tailstock with a live center along with the vacuum chuck.**

**Be sure to remove the “O” rings that came with your Hold Fast system and clean off any mastic that may be on the drum.**

**It is not necessary to glue the seals onto the coupling – simply slip them on.**

**If the seal is a little loose, you can adjust the wall thickness of the Vacuum Drum by wrapping it with masking tape to enlarge its outside diameter. Usually one or two wraps of masking tape works well but more or less may be required.**

**The safe use of any Rubber Chucky product is entirely the responsibility of the purchaser/user. If you do not agree with this, please return the Rubber Chucky product immediately for a full refund. Your use of any Rubber Chucky Products, LLC product will constitute your agreement to your responsibility.**
